

Figure S5. The expression of genes encoding inflammasome components are regulated during the erythroid differentiation of K562 cells. Related to Figure 6. K562 cells were incubated with hemin for 48 h and then the mRNA levels of the genes *NLRC4*, *NLRP3*, *PYCARD* and *CASP1* were determined by RT-qPCR (n=3). The results are shown as the mean \pm SEM. *p<0.05; **p<0.01; ***p<0.001 according to ANOVA followed by Tukey multiple range test.
